

Jeux vidéo et perte de contrôle : Vers une meilleure compréhension du rôle des caractéristiques de conception

Maèva Flayelle*, Mélina Andronicos, Daniel L. King & Joël Billieux

*Institut de Psychologie, Université de Lausanne (UNIL)

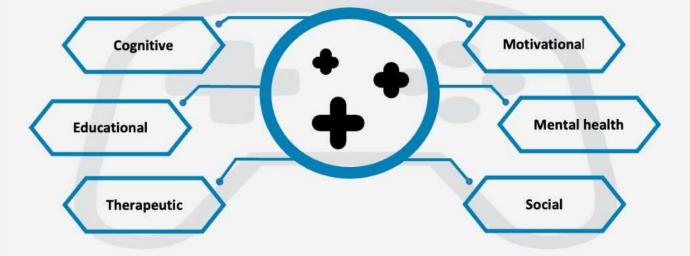

Declaration of Financial Interests or Relationships

I have no financial interests or relationships to disclose regarding the subject matter of this presentation.

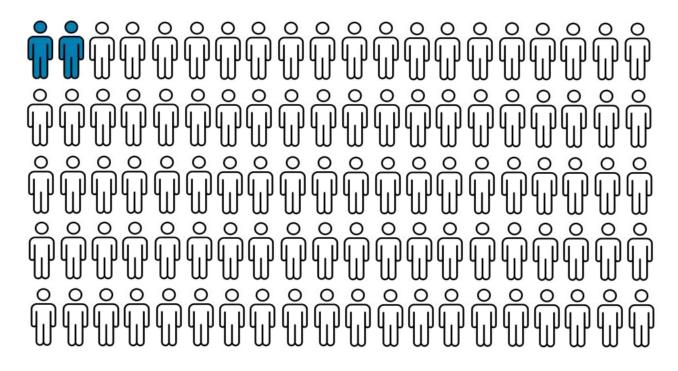

De nombreux bénéfices...

... mais parfois aussi des conséquences négatives pour certains

Trouble lié au jeu vidéo

Concerne **1,5-2%** de la population générale

Officiellement reconnu en 2019 par l'OMS dans la 11^{ème} Classification Internationale des Maladies (CIM-11)

Efforts de recherche

Caractéristiques de conception des jeux

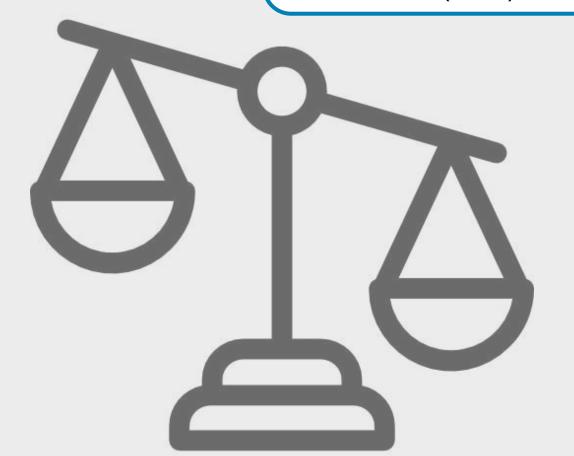

Efforts de recherche

Jeux en ligne Jeux de rôle en ligne massivement multijoueurs (MMORPG) Jeux de tir à la première personne (FPS) Arènes de bataille en ligne multijoueurs (MOBA)

Taxonomies existantes

- Mécaniques de surprise
- Contenu généré aléatoirement
- Loot boxes

- Graphismes et sons réalistes
- Eléments de jeu de rôle
- Accomplissements dans le jeu

Offres à durée limitée

- Systèmes régulant la progression des joueurs
- Récompenses
- Achats intégrés (microtransactions)

Flayelle et al. (2023)

Monde virtuel persistant

Quelles caractéristiques sont les plus susceptibles de favoriser des pratiques de jeu dérégulées?

Qualitative studies - Exploring which features most fulfill psychological needs

Experimental studies - Manipulating features to assess their impact on enhancing gaming motivations

Behavioral methods – Tracking emotional and attentional responses to features to determine which ones act as motivational triggers

SUGGESTED RESEARCH AVENUES

Qualitative studies - Exploring which features most fulfill psychological needs

Experimental studies - Manipulating features to assess their impact on enhancing gaming motivations

Behavioral methods – Tracking emotional and attentional responses to features to determine which ones act as motivational triggers

SUGGESTED RESEARCH AVENUES

WHEN

Real-time behavioral tracking data – Examining how circadian rhythms may exacerbate the effects of features

Ecological Momentary Assessment studies – Investigating how features interact with players' psychological states throughout the day

Qualitative studies - Exploring which features most fulfill psychological needs

Experimental studies - Manipulating features to assess their impact on enhancing gaming motivations

Behavioral methods – Tracking emotional and attentional responses to features to determine which ones act as motivational triggers

.

WHOM

Classification studies – Identifying which features are more prominent in the games favored by atrisk player subgroups

Longitudinal studies – Examining which features have a formative influence on the emergence of loss of control over gaming in adolescents

Cross-cultural studies – Comparing how features impact dysregulated gaming across cultural contexts

SUGGESTED RESEARCH
